

EventForce Management System – Ideation Phase

Problem Identification

Event organizers may need to use multiple applications or communicate with different teams to manage event details, registrations, schedules, attendees, and event progress.

Proposed Solution

Create a centralized Salesforce CRM solution with event data, automated event management workflows, attendee management, notifications, and a conversational Agentforce interface.

Users

Event Organizers, Event Managers, Attendees/Participants, Staff/Volunteers, Support Staff and Administrators.

Core Use Cases

Event creation and management, participant registration, event scheduling, attendee tracking, automated notifications, event status updates, operational reporting, and AI-assisted customer support.

Technology Selection

Salesforce CRM, Custom Objects, Flow Builder, Apex, Lightning Web Components, Agentforce and Prompt Builder.

Expected Outcome

A scalable academic prototype demonstrating end-to-end event lifecycle management with automation, centralized data management, reporting, and AI assistance.
